A smart dental tool to extract the tooth, increasing the dentist's hand strength by 40% and controlling the pressure on the teeth.

X-Forceps is designed to increase the force of the dentist's hand by 40 %. With a camera mounted on the instrument, it helps the doctor get the tooth right.

The sphygmomanometer inside the device calculates the amount of force, and the monitor mounted on the instrument's handle shows the force pressure. All this information is displayed on the mobile phone.
